

Idiotcoin

White Paper

"Stupidity is all around us. It's just not evenly distributed. Idiotcoin fixes this."

— Tobias Fancee, Founder of Idiotcoin

Idiotcoin

Description

Idiotcoin is meme coin by idiots, for idiots. To avoid any confusion, we put “idiot” right in the name, so everyone knows who it’s for. Idiotcoin’s ticker is IDIOT, and it is an asset registered in the Cardano Foundation’s Token Registry. However, make no mistake; this fact does not mean Idiotcoin is anything other than a tokenized meme representing nothing. Idiotcoin is not a product, investment, or security. It has no real use case, utility, or value. It’s just native asset on the Cardano blockchain based on the “idiot” meme that we ripped off from HOSKY. Lol.

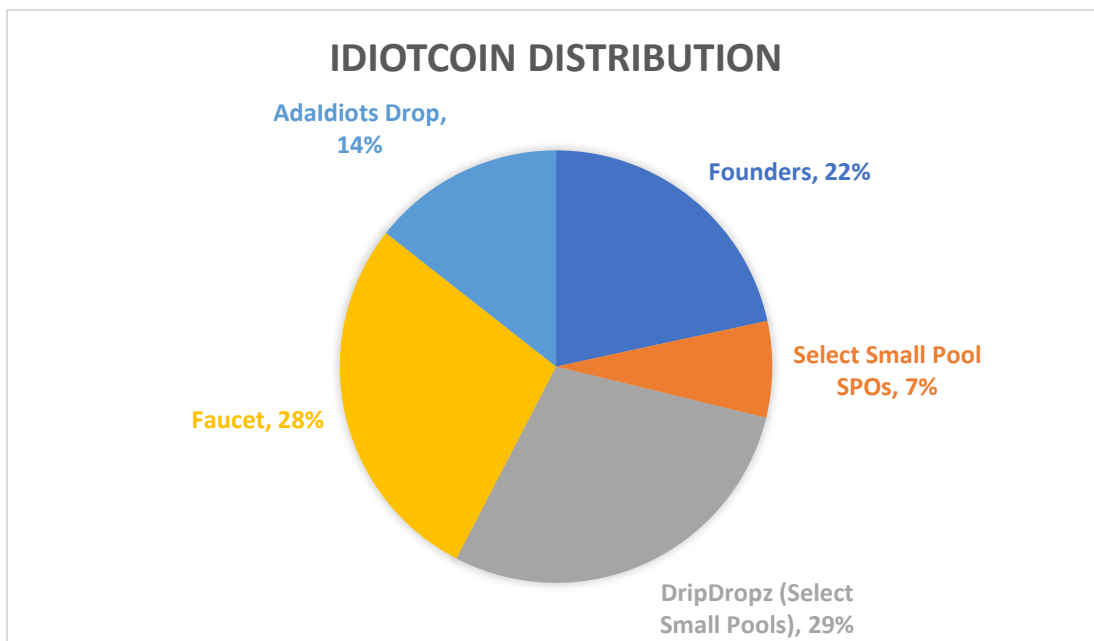

Technical Details

It's a native asset on Cardano with zero value. We minted it for a tx fee of like 0.3 ADA or something. Oh, and it's registered on the Cardano Foundation's Token Registry. Imagine being the guy who merged that pull request. Lmao.

Purpose

None. Didn't you read the previous sections? Maybe to more "evenly distribute stupidity" if you REALLY want a purpose.

Tokenomics

Total Supply: 69,420,000,000,000

- Founders – 15 trillion for the founders of Idiotcoin and AdaIdiots (Tobias Fancee and others who contributed)
- Select Small Pool SPOs – 5 trillion, for the SPOs of the small single pools that will be included in the DripDropz distribution because why not?
- DripDropz (Select Small Pools) – 20 trillion for the distribution of Idiotcoin to delegators of the select small pools (launch date: TBD)
- Faucet – 19.42 trillion for the nonprofit faucet where anyone can get Idiotcoin

- AdaIdiots Drop – 10 trillion for those who mint AdaIdiots, 1 billion per CNFT, 10k CNFTs in total

*5 trillion of the founder's share will likely be redistributed sometime in the future. Perhaps adding to the faucet or adding more pools for distribution

A Haiku for Cardano

Cardano is great;
Cardano is cool. Let's keep
It decentralized.
